Logging into the Kaltura Management Console (KMC)

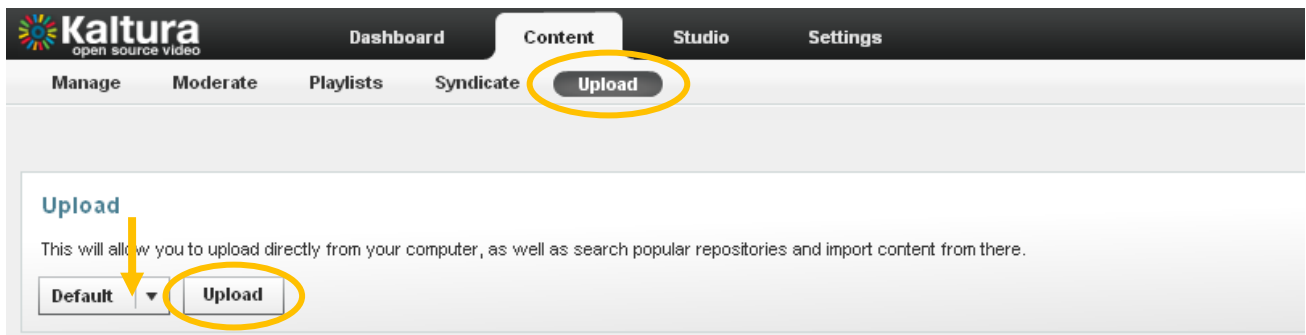

Go to the Kaltura Management Console (KMC) at: <http://www.kaltura.com/index.php/kmc> and log-in with the credentials that you received in the “Kaltura Registration Confirmation” email.

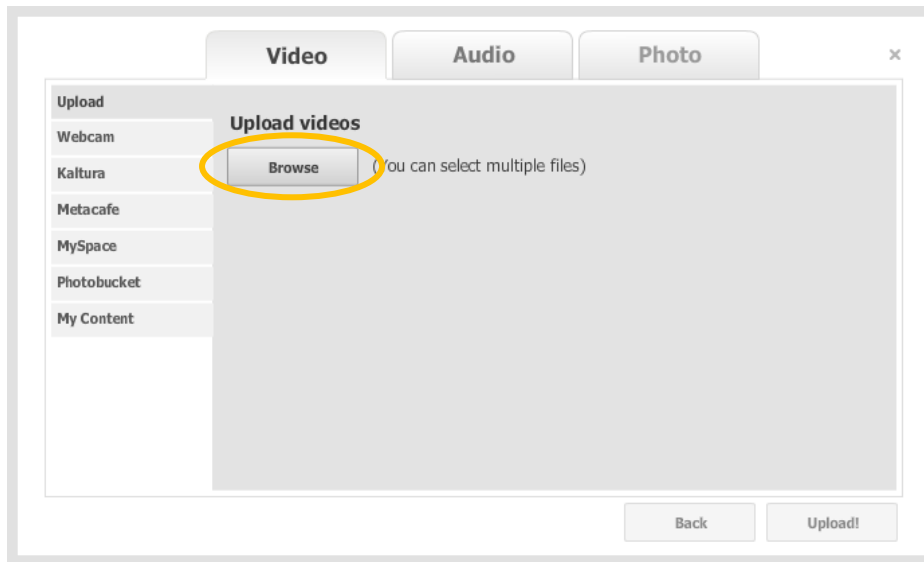

Uploading videos from your desktop to your website

Upload videos to the KMC

1. Go to the Content tab > Upload section.
2. Select the Transcoding Profile to use in this upload session using the drop-down menu
3. Click the Upload button to launch the Media Uploader.

4. In the Media Uploader, click the browse button to select videos from your desktop. Hold down the CTRL key to select multiple files.

- Click the upload button to start the file transfer

Status	Name	Size	Remove
	animated logo.avi	482.0KB	
	dilbert.flv	614.0KB	

- Add titles and tags to your videos.

Enter tag for all videos

Title: animated logo.avi
Tags: Office, brand

Title: dilbert.flv
Tags: cartoon, office

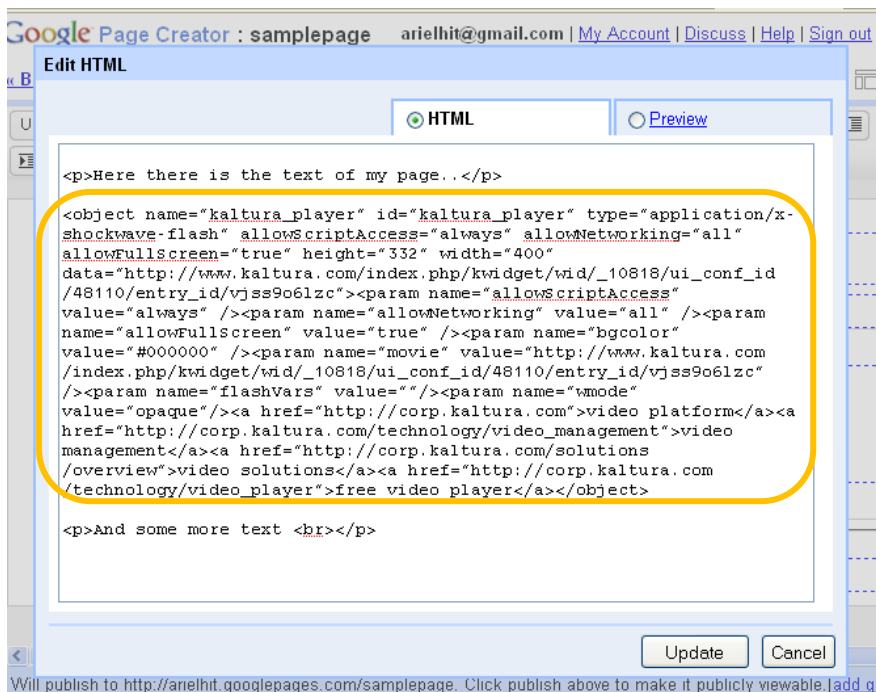

- After the system completes the file conversions you will be able to see your uploads and their status in the Manage tab.

Embed videos on your site

1. In the Manage tab, locate the files that you want to place on your website and click on Preview & Embed

2. Select your preferred player skin from the drop down menu and grab the embed code.

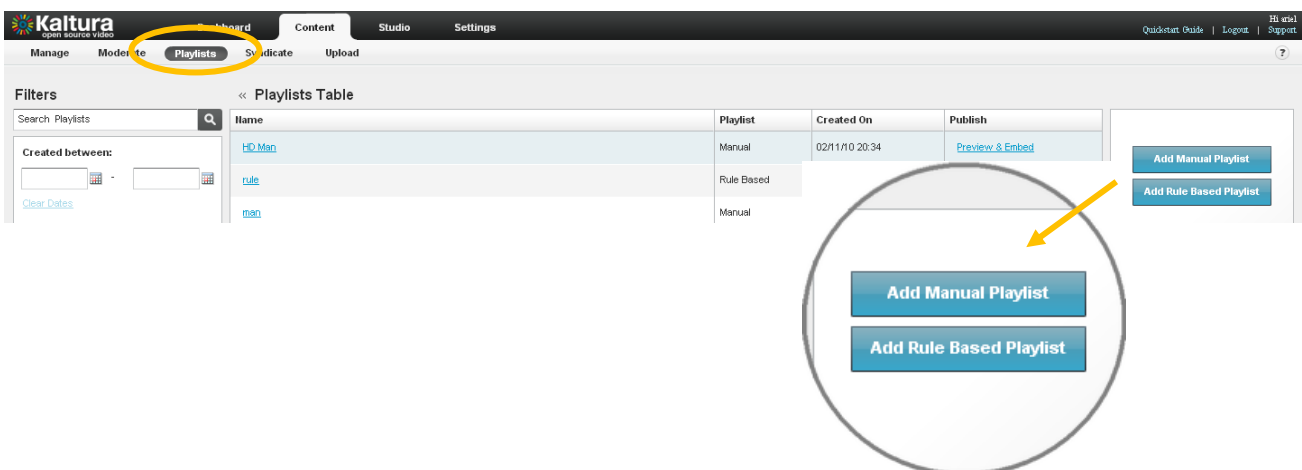

3. Add the embed code to your website HTML source and you're done

Creating Playlists and embedding them on your website

A playlist is a list of media items (videos, audios, images) that can be embedded with a player in your website. Manual playlists allow you to select a static list of items, while rules based playlists allow you to define a dynamic list.

Go to the Content tab > Playlist section and select either a Manual Playlist or a Rule Based Playlist

Creating a Manual Playlist

1. Enter a name for your playlist (required) and select Manual in the Type field.
2. Using the Filters search for the entries you'd like to include - the results will appear in the Entries Table.
3. Add entries to your playlist by clicking the desired entry followed by the Add or Remove buttons.
4. Click "Save" to complete the process.

Creating a Rules Based Playlist

A rules based playlist is a dynamic playlist that is automatically updated when content is uploaded or edited. For example you can create a "Most Viewed" playlist, a "Most Recent" playlist, as well as a playlist based on single or multiple filters, such as "videos tagged with "dogs" and created during January 2010".

Your playlist can be based on a single rule or multiple rules:

Single Rule Playlist

1. Enter a name for your playlist (required).
2. Using the Filters search for the entries you'd like to include - the results will appear in the Entries Table.

Note: You can choose more than one type of filter (for instance, text search + date + media type), the logical relationship between fields will be an "AND" relationship.

3. Select your preferred video order from the Order By drop down menu

4. Select the total number of entries you'd like to include in the playlist via the Limit Playlist result box.
5. Click "Save Changes" to complete the process.

Multiple Rule Playlist - Advanced Mode

Advanced Mode enables you to create playlists based on multiple rules.

1. Click Switch to Advanced Mode.
2. Enter a name for your playlist (required).
3. Click Add Rule to create a new playlist rule (see Single Rule Playlist to learn about creating rules)
4. Add any number of additional rules. Use the Remove Rule and Edit Rule buttons to make changes to your list of rules.
5. Rules will be applied to the playlist in the order they appear, so use the arrows to change the order of the rules

```

Select Code

6. Add the embed code to your website HTML source.

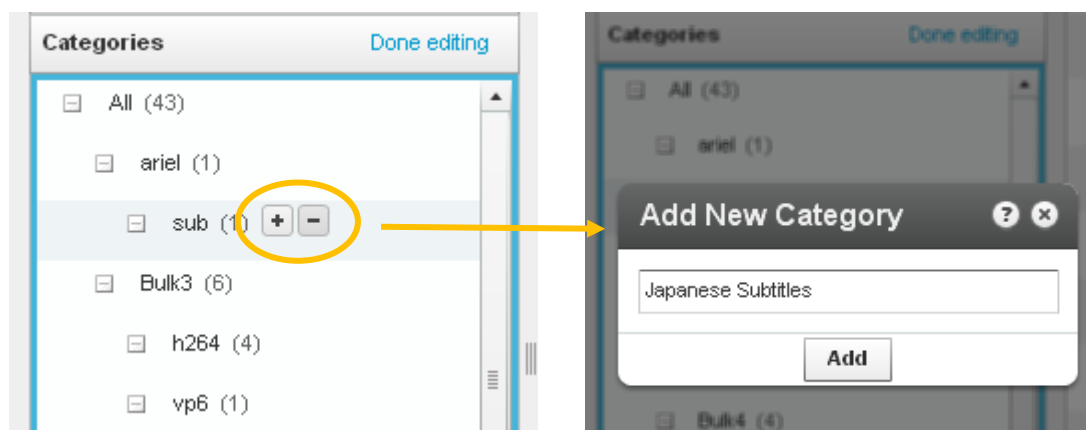

Creating and Managing Content Categories

Media entries are divided into categories. The different categories are built in a tree-like hierarchy where each category can include multiple sub-categories.

1. To add a content category click Edit on the top left corner of the Filter bar.

2. Add or remove categories by clicking on the “+ / -” icons that appear when you hover with your mouse over a specific category.

3. To change the tree location of any category just drag-and-drop categories from one location to another.
4. To assign a media entry to a specific category, just drag-and-drop the entry from the entries table on the right to the desired category on the left.

Migrating content from your existing hosting / video service – Bulk Upload Process

1. Go to the Content tab > Upload section > Import from Existing Host
2. Download the sample CSV file – the file contains examples of how to add the URLs and metadata of your existing content. Replace the sample data with your own.

Import from Existing Host

If the content you wish to upload is already hosted on the web, you can easily direct the Kaltura servers to import it for you.

- Download the sample CSV file [here](#)
- Edit the CSV file locally - add the URLs of your content, and additional meta-data such as title, description, tags in the relevant columns.
- Click Browse and select the CSV file you have edited.
- Submit the CSV files so that the Kaltura servers will start to import the files.
- Use the table below to keep track of the progress of your import.

Submit CSV

- Click Submit CSV to upload the modified file.
- The process is complete once the status in the table is Finished.

Content Syndication & SEO

[Content Syndication](#)

- [TubeMogul](#)
- [iTunes](#)

[SEO](#)

- [Google](#)
- [Yahoo!](#)

Content Syndication

Kaltura allows you to create video feeds in multiple formats that are ready for submission to 3rd party platforms.

TubeMogul

This premium syndication service enables you to distribute your content to over 20 video portals including YouTube, Dailymotion, Metacafe, etc.

Note: requires a Kaltura-TubeMogul premium account ([contact us](#) to learn more)

1. Go to the Content tab > Syndicate section and click Create New Feed.

2. Enter the feed name (required), select TubeMogul from the Feed Type drop down, enter the TubeMogul Parameters and click Add Feed

Add Video Feed

'Feed Name:

Select Content:

☒ All Content
☐ Only content from this playlist

My new playlist 3

Feed Type:

TubeMogul Parameters:

Content Flavor: ☒ Add to default transcoding profile

Categories:

These categories will be use when pushing your content to the various sharing websites

Add Feed

3. Copy the Feed URL

If you already have a Kaltura-TubeMogul account submit this feed to TubeMogul by following these steps:

1. Copy the feed URL

4. Login to your [Kaltura–TubeMogul account](#) and go to Advanced Tools > More Tools > select “MRSS Feed Manager” > Submit your feed

iTunes

This feed allows you to submit your content to the iTunes Store as a podcast.

1. Go to the Content tab > Syndicate section and click Create New Feed.
2. Enter the feed name (required), select iTunes from the Feed Type drop down, enter the iTunes Parameters and click Add Feed
3. To test the feed before submitting to the iTunes Store:
 - (a) copy the URL
 - (b) Launch the iTunes application installed on your desktop
 - (c) Go to Advance > Subscribe to podcast and submit the feed URL
4. To **submit this feed** to the iTunes Store as a podcast/ video podcast:
Note that you will need an active Apple ID and the iTunes application installed
 - (a) Copy the feed URL
 - (b) Go to <https://phobos.apple.com/WebObjects/MZFinance.woa/wa/publishPodcast> (launches iTunes application in the right page)
 - (c) Submit your feed

This feed is ready for submission ? x

You can transcode any entry to H.264 for Export by going to the Manage section of the entry, then open the specific entry that you would like to transcode, go to the Flavors tab, and select the "Convert" option.
If you wish to transcode multiple entries into HQ MP4 for Export, please contact Kaltura professional services: <http://corp.kaltura.com/support/form/project/13>

In order to test this feed before submitting to the iTunes Store please follow these steps (Note that you will need the iTunes application installed):

1. Copy the feed URL http://www.kaltura.com/api_v3/getFeed.php?feedId=0_eky94t82
2. Launch the iTunes application installed on your desktop
3. Inside iTunes go to "Advance > Subscribe to podcast" and submit the feed URL there

In order to submit this feed to the iTunes Store as a podcast/ video podcast, please follow these steps (Note that you will need an active Apple ID and the iTunes application installed):

1. Copy the feed URL http://www.kaltura.com/api_v3/getFeed.php?feedId=0_eky94t82
2. Go to <https://phobos.apple.com/WebObjects/MZFinance.woa/wa/publishPodcast>
(launches iTunes application in the right page)
3. Submit your feed

OK

SEO

Submitting feeds to major search engines helps to increase your content's SEO, and ultimately direct more traffic to your website.

Google

1. Go to the Content tab > Syndicate section and click Create New Feed.
2. Enter the feed name (required), select Google from the Feed Type drop down, enter the Google Parameters and click Add Feed

Add Video Feed

Feed Name:
New Feed 2010

Select Content:
☒ All Content
☐ Only content from this playlist

My new playlist 3

Feed Type:
Google

Google Parameters:

Content Flavor:
Source
☒ Add to default transcoding profile

Landing Page:
http://www.news24.us

Enter the URL template that you would like to appear in the Google search results for each video in this feed. The system will append the specific entry id for each entry. For example: "http://mysite.com?videoid="

Playback directly from Google?:
☒ Yes and use this video player:

Player with black hover controls

This player will appear within the Google search results page
☐ No, only linkback to my site

Adult Content:
☐ This feed includes adult content

Add Feed

3. Submission of video feeds to Google is free of charge, yet requires some technical knowledge. It is recommended that your website's webmaster be available for assistance.

Here are the technical guidelines for submission:

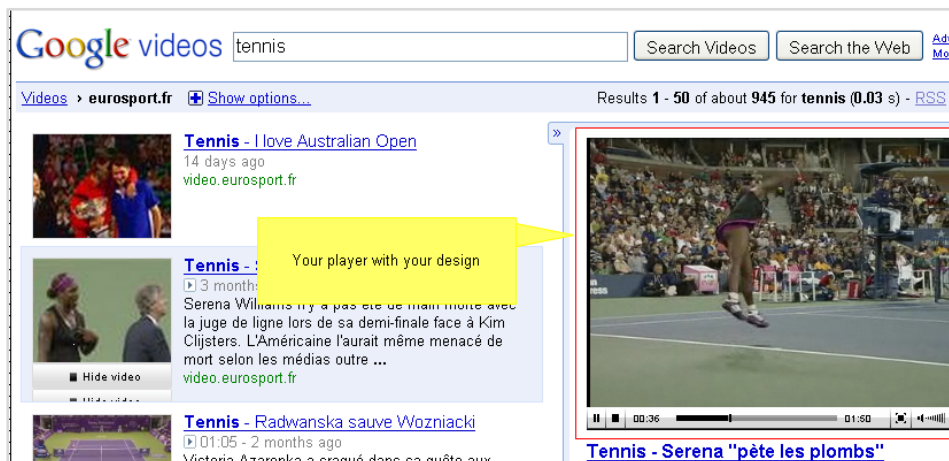

a. Google Webmaster Tool Setup

- Setup a Google Webmaster account for your website:
<https://www.google.com/webmasters/tools/home>
- Setup your website in the Google Webmaster Tool – follow the directions here:
<http://www.google.com/support/webmasters/bin/answer.py?hl=en&answer=34592>
Make sure your site is valid based on the Google instructions.

b. Feed submission

- Create a server page on your website that redirects to this feed URL
For example, for a php implementation save a php file named redirect.php with the following content (replace the XXXXX with your feed URL)

```
<?php
Header( "HTTP/1.1 301 Moved Permanently" );
Header( "Location : XXXX" );
?>
```
- Login to the Google Webmaster Tool <https://www.google.com/webmasters/tools/home>
- Within the Google Webmaster Tool go to "Site configuration > Sitemaps > Submit a sitemap"
- Submit the feed as your redirect page in your site, for example <http://mysite.com/redirect.php>

Yahoo!

1. Go to the Content tab > Syndicate section and click Create New Feed.
2. Enter the feed name (required), select Yahoo! from the Feed Type drop down, enter the Yahoo Parameters and click Add Feed

Add Video Feed

Feed Name:
New Feed 2010

Select Content:
☒ All Content
☐ Only content from this playlist

My new playlist 3

Feed Type:
Yahoo!

Yahoo Parameters:

Content Flavor:
Source
☒ Add to default transcoding profile

Landing Page:
http://

Enter the URL template that you would like to appear in the Yahoo search results for each video in this feed. The system will append the specific entry id for each entry. For example: "http://mysite.com?videoid="

Playback directly from Yahoo?:
☒ Yes and use this video player:

Light player

This player will appear within the Yahoo search results page
☐ No, only linkback to my site

Web Site:
http://

Feed Description:

Add Feed

3. Copy the feed URL
4. Go to <http://video.search.yahoo.com/mrss/submit>
5. Fill in the form and submit your feed as a "Full feed"

Live Streaming

[Basic setup](#)

- [HW & SW setup](#)
- [Set up a stream in the KMC](#)
- [Broadcasting setup](#)
- [Viewing setup](#)

[Advanced configuration options](#)

Kaltura's Live Streaming is a paid service. To enable live streaming for your account [contact us](#) or call +1-800-871-5224

Once your account has been enabled, follow the steps below to set up Kaltura's Live Streaming service.

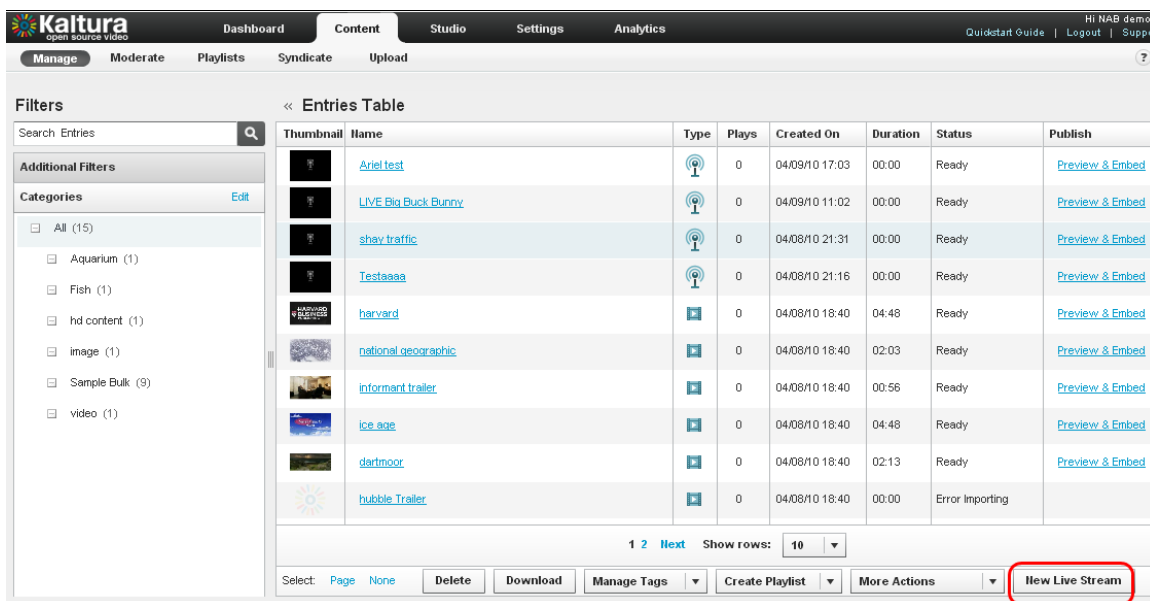

Basic setup

HW & SW setup

1. Download Flash Media Encoder (FME) from:
<http://www.adobe.com/products/flashmediaserver/flashmediaencoder/>
2. Install FME on your local Windows machine (follow the FME installation guide and minimum requirements described in Appendix A of this document)
3. Connect your camera to the installed computer

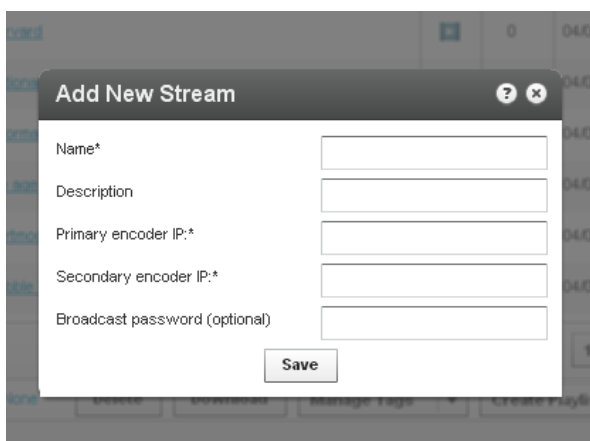

Set up a stream in the KMC

1. Login into the Kaltura Management Console, navigate to the Content/ Manage tab and click on the “New Live Stream” button.

The screenshot shows the Kaltura Management Console interface. The top navigation bar includes 'Dashboard', 'Content', 'Studio', 'Settings', and 'Analytics'. The 'Content' tab is selected, and the 'Manage' sub-tab is active. The 'Entries Table' displays a list of video entries with columns for Thumbnail, Name, Type, Plays, Created On, Duration, Status, and Publish. The 'New Live Stream' button is highlighted with a red rectangle at the bottom right of the interface.

2. Fill in the form with the following details:

The screenshot shows the 'Add New Stream' form. It contains the following fields:

- Name*
- Description
- Primary encoder IP:*
- Secondary encoder IP:*
- Broadcast password (optional)

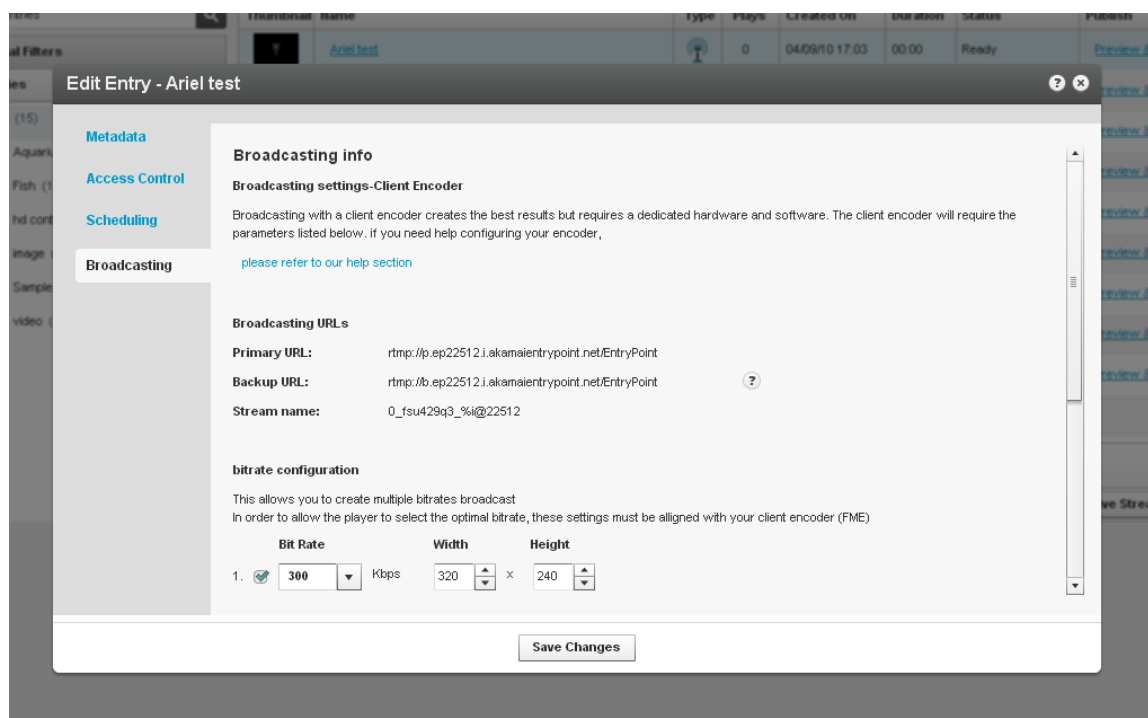

A 'Save' button is located at the bottom of the form.

- **Name** – the name of the stream that will appear in the KMC entries list
- **Description** – a description of the stream (optional)

- **Primary encoder IP** – the public address that will be used for streaming (the computer where the client encoder is installed)
Note: your IP address can be retrieved by browsing from the computer where the FME is installed to <http://www.whatismyip.com/>
- **Secondary encoder IP** – if you are using two encoders for redundancy, fill in the secondary encoder. If you are using only a single encoder, simply copy the Primary encoder IP to the secondary encoder IP field.
- **Broadcasting password** – the password required for broadcasting. You will be required to fill this into your client encoder (FME). If you do not chose a password the system will create one for you.
Note: it may take up to 20 minutes until the stream is provisioned with the CDN.

Broadcasting setup

Go to the “Broadcasting” tab of the live entry you just created and copy the details to your FME, you can do this either by copying the details manually, or by using the “Export XML to FME” option:

Edit Entry - Ariel test

Metadata
Access Control
Scheduling
Broadcasting

Broadcasting info
Broadcasting settings-Client Encoder
Broadcasting with a client encoder creates the best results but requires a dedicated hardware and software. The client encoder will require the parameters listed below. if you need help configuring your encoder, [please refer to our help section](#)

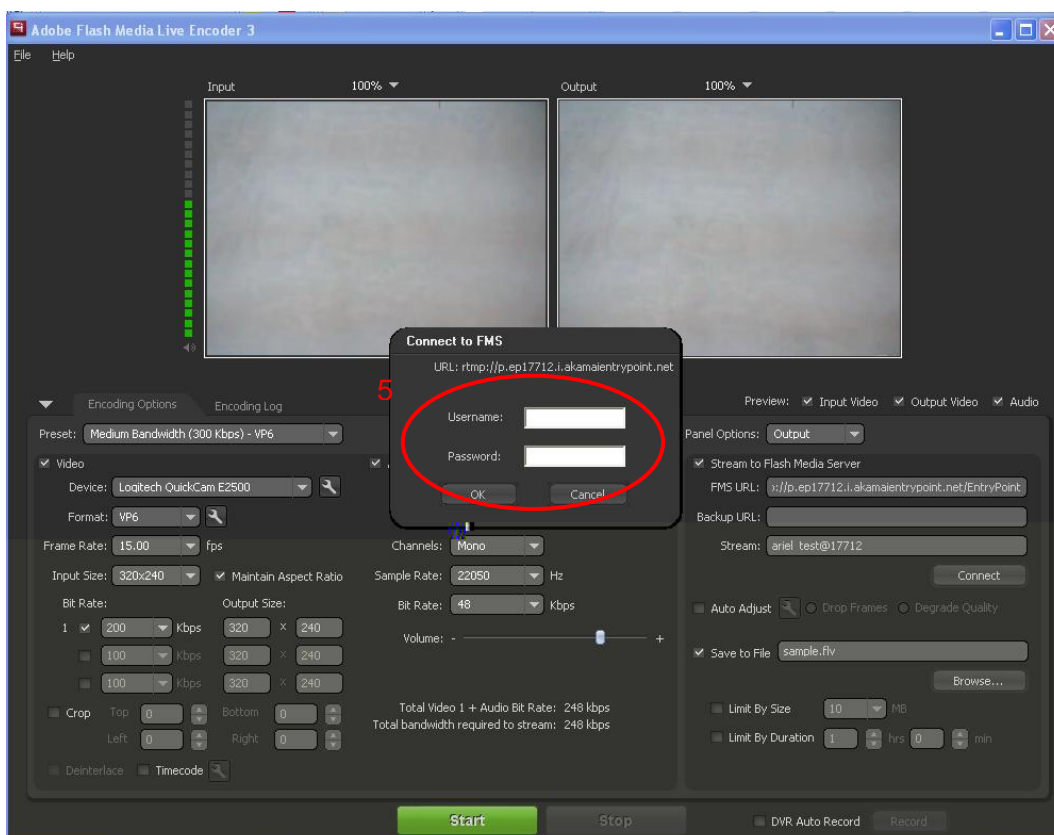

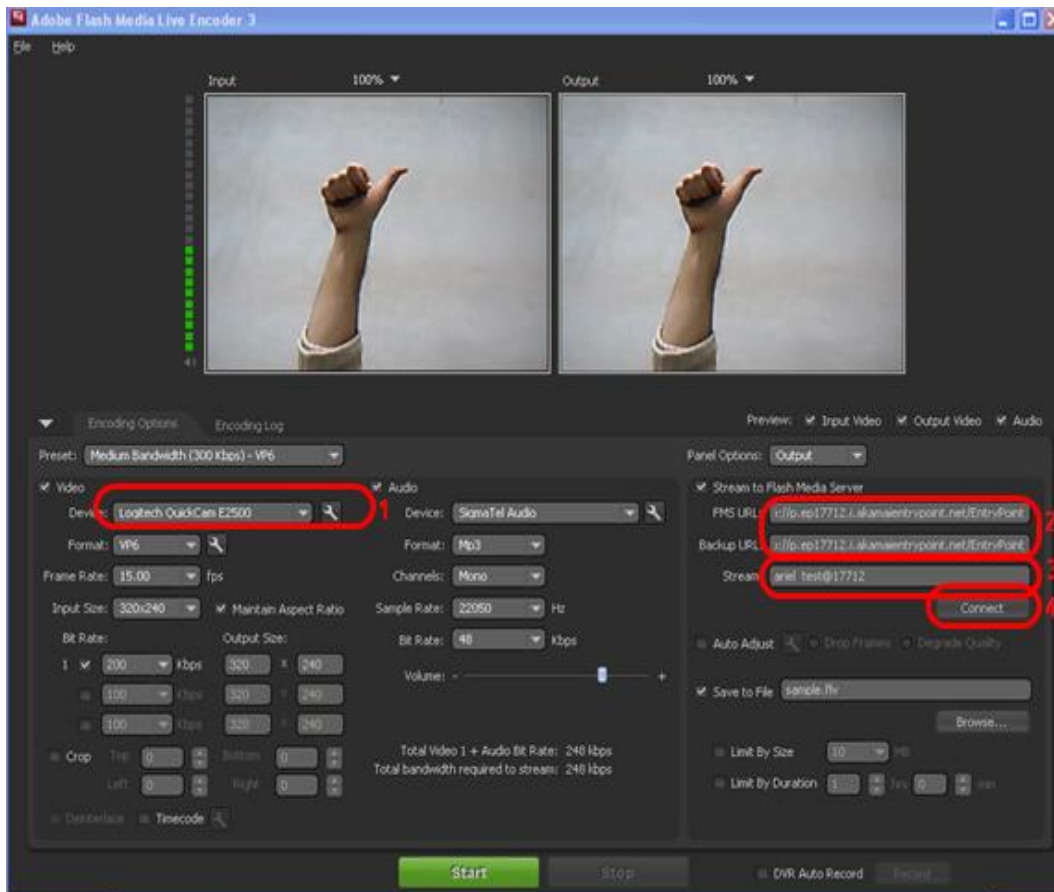

Broadcasting URLs
Primary URL: `rtmp://p.ep22512.j.akamaiendpoint.net/EntryPoint`
Backup URL: `rtmp://b.ep22512.j.akamaiendpoint.net/EntryPoint`
Stream name: `0_fsu429q3_%i@22512`

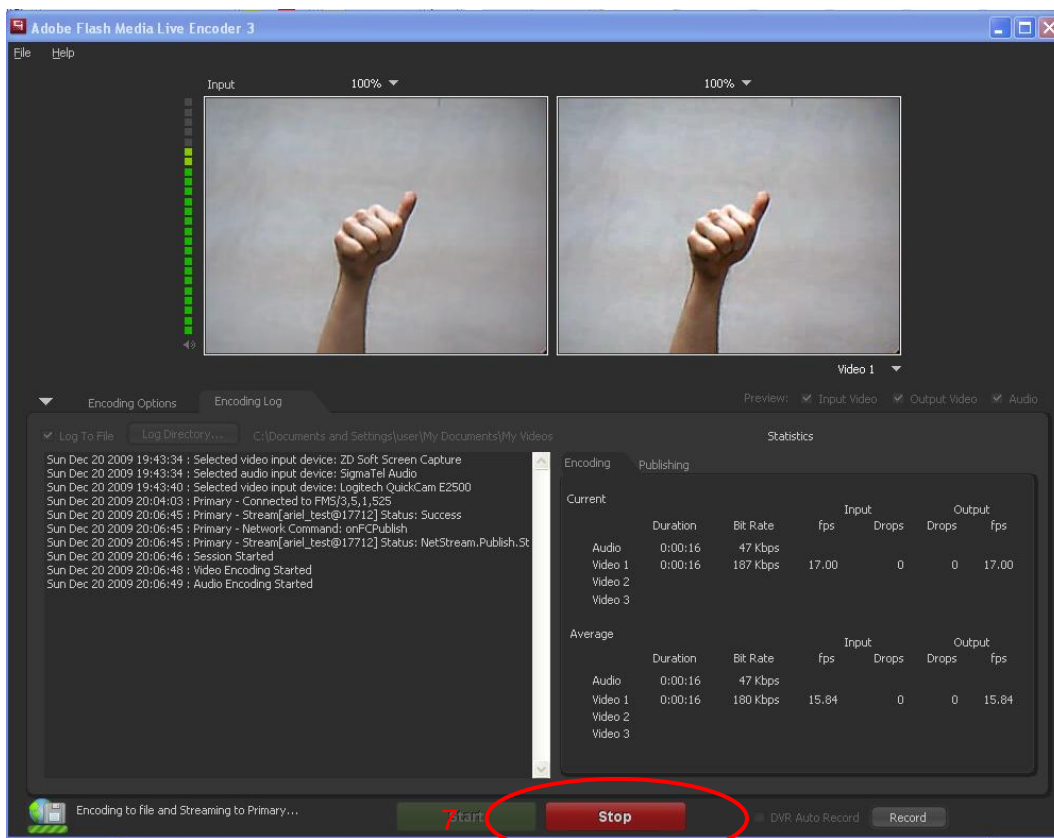

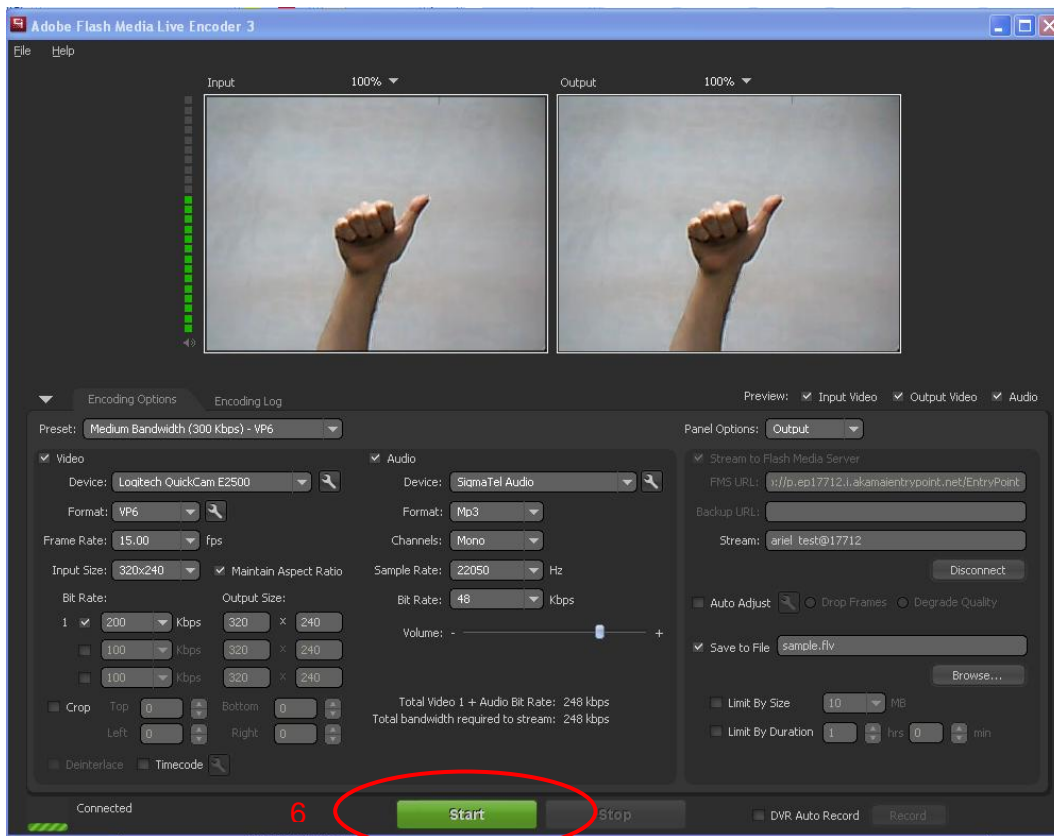

bitrate configuration
This allows you to create multiple bitrates broadcast
In order to allow the player to select the optimal bitrate, these settings must be aligned with your client encoder (FME)

Bit Rate	Width	Height
1. 300 Kbps	320	240

Save Changes

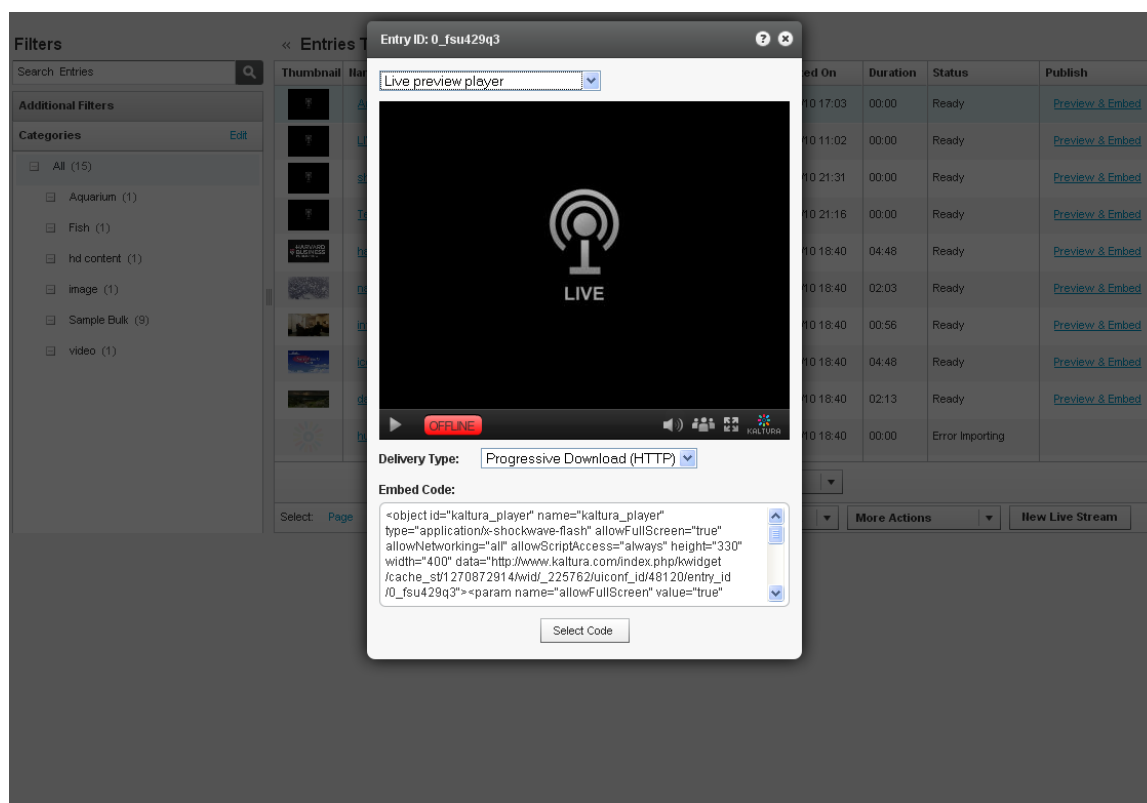

- Connect your camera to the broadcasting computer
- Run the FME software
- Configure your FME with the following parameters:
 1. Select the relevant camera from the dropdown menu in the FME software
 2. Enter the Primary URL and Secondary URL as displayed in the KMC
 3. Enter the “stream name” as displayed in the KMC
 4. Click “Connect”
 5. Enter the “User Name” and “Password” as displayed in the KMC and click “OK”
 6. Click “Start” → you are now broadcasting
 7. When your broadcast is finished, click “Stop”

Viewing setup

1. Click on the “Preview & Embed” link from the KMC

2. Select the player from the drop down menu and copy the embed code
3. Paste the embed code within an HTML page
4. Browse to the page where the embed code was inserted and press “play” on the video player.

Advanced configuration options

There are multiple factors that influence the video quality for live streaming. In order to receive good results you should optimize the settings based on your specific needs.

The table below can be used as a starting point for optimization and setup - it provides a rough estimate for the different factors based on the video dimensions.

Video Dimensions	Bitrate Required (Mbps)	Camera Requirements	FME HW Requirements	Broadcaster Uplink, Viewer Downlink Requirements (Mbps)	Throughput example for 1000 concurrent viewers of 1 hour broadcast
320x240	0.3	support frame size & bitrate	Dual Core 2GB RAM	0.4	135 GB
640x480	1.4		Quad Core Xeon 3GB RAM	2	630 GB
1024x720	3.5		8 Core Xeon 3GB RAM	5	1600 GB

For further reading on how to set up these parameters in FME, as well as additional advanced configuration options please refer to the FME guide available at:

http://help.adobe.com/en_US/FlashMediaLiveEncoder/3.0/Using/flashmedialiveencoder_3_help.pdf

Video Delivery Settings

Video Delivery Settings

- [HTTP Delivery](#)
- [RTMP Delivery with Adaptive Bitrate](#)
- [Adding the flavor selector module](#)

Video Delivery Settings

Choose between two types of video delivery settings - HTTP Delivery or RTMP Delivery with Adaptive Bitrate.

HTTP Delivery

With HTTP Progressive download, the digital media begins downloading and once a specified amount of data becomes available to the video player, the media begins to play while the rest of the data continues to buffer.

To select this delivery setting go to Content > Manage > Preview and Embed and select Progressive Download (HTTP) from the drop-down menu.

Entry ID: 0_3xu9cvx0

KDP3 Light Player

Delivery Type: Progressive Download (HTTP)

Embed Code:

```
<object id="kaltura_player" name="kaltura_player"
type="application/x-shockwave-flash" allowFullScreen="true"

/cache_st/1267046976/wid/_7463/uiconf_id/48501/entry_id
/0_3xu9cvx0"><param name="allowFullScreen" value="true"
```

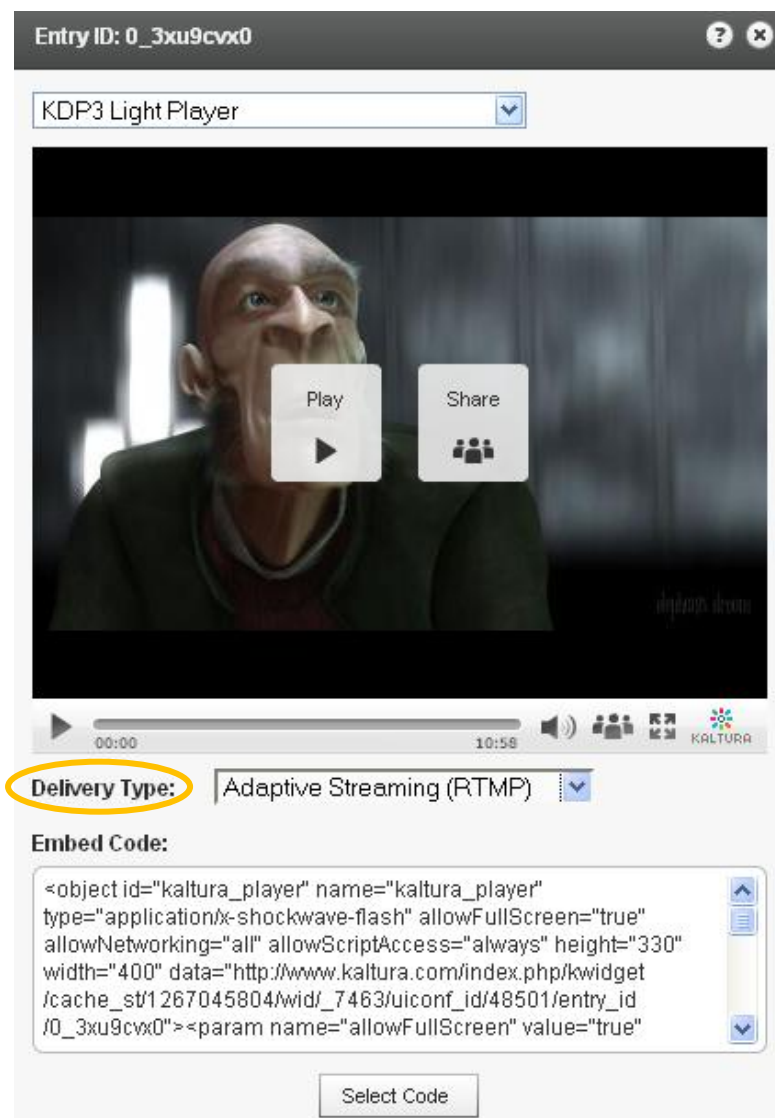

Select Code

RTMP Delivery with Adaptive Bitrate

Adaptive bitrate is a technique of detecting a watcher's bandwidth and CPU capabilities in real time and then adjusting the quality of a video stream. The result is very little buffering, fast start time and a good experience for both high-end and low-end connections.

The RTMP protocol maintains a single persistent connection and allows real-time communication. Video and data are split into fragments, which then guarantees smooth delivery of video and audio streams.

To select this delivery setting go to Content > Manage > Preview and Embed and select Adaptive Streaming (RTMP) from the drop-down menu.

Adding the Flavor Selector Module

Any entry is available in various transcoding flavors. The flavor selector module allows the viewer to manually select the video flavor he wishes to watch, based on his preferences.

Note: If you are broadcasting with Adaptive RTMP then the flavor selector will be set to “auto”.

In order to add the flavor’s selector module:

1. Go to Studio > Players List and create a new player or edit an existing one.
2. In the Features tab, go to the Features List > Controls and check Flavor Selector.
3. Preview your selection and click Save Changes to complete the process.

Advertising

Connecting with Ad Servers and networks via adap.tv

To add adap.tv's service to your Kaltura players start by signing up with adap.tv ([Contact us](#) to learn more) – you will then receive an adap.tv Partner Key.

1. Go to the Studio tab and edit an existing player or create a new one.
2. In the Features tab, open the Advertising section from the features list.
3. Check the adap.tv box and then click Options.

4. Enter your adap.tv Partner Key and click Apply.

- For example connecting to DART via adapt.tv would simply require pasting the Ad Tag URL the AdTech Server supplies.

Connecting with Tremor Media

1. To add Tremor Media's service to your Kaltura players start by signing up with Tremor Media ([Contact us](#) to learn more) – you will then receive a Tremor Media Program ID.
2. Go to the Studio tab and edit an existing player or create a new one.
3. In the Features tab, open the Advertising section from the features list.

Edit Player

Target, manage and customize your ads via the [Tremor Media console](#) (Acudeo).

Via Tremor Media's Acudeo console you can specify ad sources for each ad slot within your content.

The screenshot displays the Tremor Media's Acudeo console interface. At the top, a 'TIMELINE' section shows a sequence of video elements: OPENING SLATE, PRE-ROLL AD (highlighted in orange), BUMPER, VIDEO CONTENT (with a sub-label MID-ROLL AD OVERLAY AD), POST-ROLL AD, and END SLATE. Below the timeline, the 'Pre-Roll Ad' configuration section is visible. It includes a 'Show advanced features' checkbox, a 'Display' dropdown set to '1', and two radio button options for ad placement: 'before every 1st video starting with the 1st video' (selected) and 'before the 1st video, then after every 1 minutes of content video'. The 'Ad Source' and 'Failover Ad Source' are both set to 'Tremor Media'. The 'Ad Tag URL' for both is 'http://adserver.adtechus.com/addyn/3.0/5132/383941/0/16/ADTECH;loc=100;nope'. At the bottom, a 'Timeout value for all Ad Tag responses' is set to '8000 milliseconds'.

Player Design

 - [Additional feature configuration options for playlists](#)
- [Configuring the player style](#)
- [Creating a Multiple Playlist](#)

[Designing and Configuring a New Player or Playlist](#)

The Studio section of the KMC enables you to create new configurations and design for players and playlists. Add, remove and adjust multiple buttons and features, and create a look to match your site.

Start by logging-in to the KMC and going to the Studio tab. Select the type of player you would like to create: player, player with playlist (horizontal/vertical) or player with multiple playlists.

Players List

In this page you can customize the look and the functionality of your players. You can design and configure a new player or select one of the players on the left for editing.

Name	ID	Save Date	Size	Mode	Template	Actions
My Player	1255952	2010-02-21 16:55:31	400x330	vizard	Player	Select Action ▼
Tremor midroll time based 4b7960f9a06e4	1245802	2010-02-15 17:00:51	400x330	vizard	Player	Select Action ▼

[New Player - Vertical Playlist](#)
[New Player - Multiple Playlist](#)

Configuring the Template Settings

1. Begin by selecting a name for your player (required). We suggest choosing an informative name – it will help you when you're ready to embed players into your site.
2. Set the Video Ratio – select normal/wide and opt to either keep or stretch your media to fit the player when the media and player aspect ratios are different.
3. Select auto-play features
4. If you're creating a Player & Playlist you'll also see the Playlist Controls – check "Automatically continue" to play the playlist media consecutively. For playlists with images, set the duration for images to be displayed during the continuous play of the playlist.

Player Details

Player Name

Video Ratio

If media aspect ratio is different than player aspect ratio:

☒ Keep original media ratio

☐ Stretch media to fit player

Auto Play

☒ Automatically play video on page load

☐ Start player muted

Playlist Controls

☒ Automatically continue to the next entry

When playing images in playlist set duration to: seconds

Configuring the Player Features

In the Features Tab you can select the features (buttons, layers and modules) to be included in your player. Any changes you make will appear in the preview area (click Preview button to see changes you've made).

The screenshot shows the 'Create New Player' interface. On the left, the 'Features' tab is active, displaying a 'Features List' with sections like Controls, Viral & Distribution, UGC & User Interaction, Subtitles & Transcriptions, Advertising, Custom Buttons, Playlist Items, and Additional parameters and plugins. A callout box points to the 'Features List' with the text: 'Features List: Select the features you want, to add and remove'. On the right, the 'Preview' pane shows a video player with a watermark and buttons. A callout box points to the 'Preview' pane with the text: 'Preview Pane: Change the player size and preview your Features List changes'. The preview area also shows player size (700 x 290), video screen size (360 x 260), and video ratio (16:11.55).

The features list is made up of different sections, controlling the various features of the player.

Player (A) below displays the default settings. The following instructions will show you how to create a more customized player, for example, Player (B).

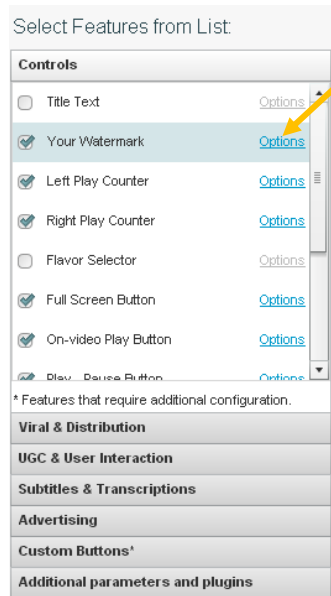

Note that Player (B) presents only one of many set-up scenarios. There are many configuration options within this section. Click the Help button on the top right of any page to learn more.

1. Change the location of the watermark logo

Go to Controls → Watermark → click Options

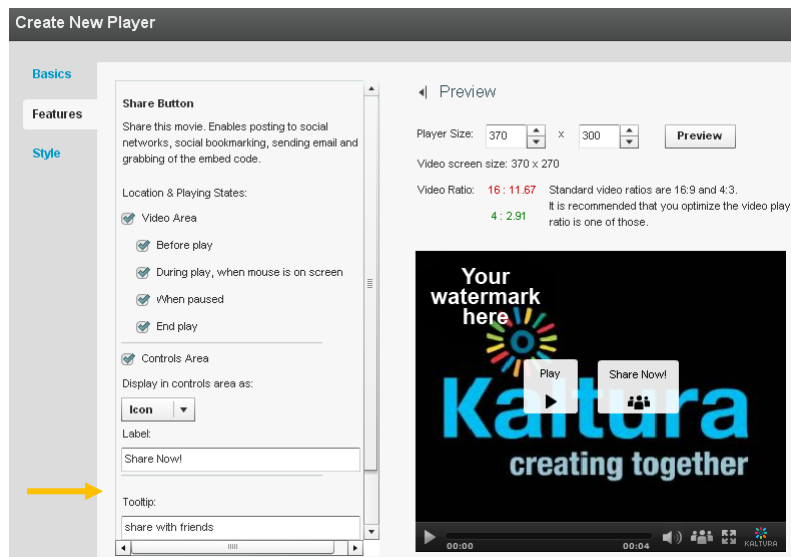

In the Watermark Location drop-down menu select Top Left, click Preview and then Apply to confirm your choice

2. Change the label of the Share button

Go to Viral & Distribution → Share Button → Options

Locate the Label field and change the default text to "Share now!", then click Apply

3. Add Download button to the video area only

Go to Viral and Distribution → check the Download feature → click Options

Remove the check mark from the Controls Area option

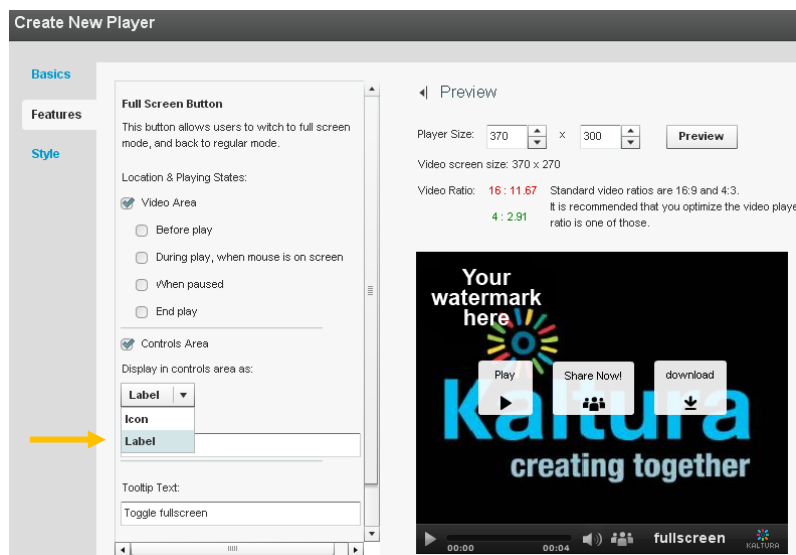

4. Change existing Fullscreen button on the control area to text button

Go to Controls → Fullscreen → Options

In the Display in Controls Area drop-down select Label

If desired, change the label text in the Button Label field

Additional feature configuration options for playlists

When creating a playlist (either with one or multiple tabs) you will see additional configuration options under the Playlist Items section. This will allow you to display various types of information for each of the playlist items, such as number of plays, tags, rank etc.

→ Play around some more to get a feel for the Features section and then continue to customize the player's design in the Style section.

Configuring the Player Style

In the Style Tab you can select the theme, colors and fonts for your player.

1. Select either a dark or light player skin.
2. Choose the colors of the icons/labels and online video buttons by clicking the small colored squares. This will open a color picker where you can select a color or enter a color value.

3. Change the font.
4. Once you are finished defining your player template, features and style, click Save Changes to complete your player configuration and design.
5. Your new player will now appear in the player list

Creating a Multiple Playlist

A Multiple Playlist is a playlist with a multiple tabs, each containing a different playlist.

Creating a Multiple Playlist:

1. If you haven't already, create the playlists that you wish to use (learn how to [create a playlist](#))

2. In the Studio Tab, select New Player – Multiple Playlist

In this page you can customize the look and the functionality of your players. You can design and configure a new player or select one of the players on the left for editing.

Name	ID	Save Date	Size	Mode	Basics	Actions
My Player	1257402	2010-02-22 11:00:05	370x300	Vizard	Player	Select Action ▼
My New Player	1257342	2010-02-22 10:24:59	700x290	Vizard	Playlist	Select Action ▼

Buttons on the right:

- New Player (Single Video)
- New Player - Horizontal Playlist
- New Player - Vertical Playlist
- New Player - Multiple Playlist

- Design and configure your playlist as [described above](#).
- Continue to the Content tab and add pre-existing playlists to your new Multiple Playlist by selecting them and clicking the arrows.
- Save Changes to complete the process.
